

✓ **Done:** Receive a grade

Due: Monday, 13 October 2025, 11:55 PM

In this unit, the focus is on the second objective/deliverable, the individual presentation. This assignment must be submitted by end of Unit 11. This accounts for 40% of your final module mark.

Assignment Brief

Carrying on from the Full Brief provided in Unit 6, this assignment focuses on the second deliverable, a practical development of your design from Unit 6.

The presentation should consist of a PowerPoint deck of up to 10 slides along with a **transcript** of the audio file.

You should submit a fully tested set of code with all required libraries. Your code should be well documented with in-line commentary or self-document code as appropriate. Remember that comments should explain why you have made certain choices, rather than what the code does.

You should supply evidence of execution, demonstrating how key aspects of your code work (via demos, screenshots and output captures). This means that you should show some key elements of your code in action to demonstrate that it runs correctly and as expected.

You should include comprehensive evidence of testing including output from test tools (e.g. unit testing) demonstrating correct code and functional testing with any remediation activity documented as well.

Please Note: In addition to the PowerPoint deck and audio file (more information below), you should also submit a README file that documents how the application runs.

Instructions

For this assignment, you are required to record a **20-minute presentation**, along with a **transcript** of the audio file. The presentation should include your demonstration. Your slides should not be wordy or repeat, verbatim, the oral presentation. Visuals, illustration, statistics, charts, tables and indication of key pointers are welcome. In assessing the presentation for marking, emphasis will be place on the oral content. However, clarity of the visual presentation will also be taken into account.

It is strongly recommended that, in order to record your presentation, you use a headset with a microphone.

There is no word count for the slide presentation, and there is no fixed word count for the oral presentation/transcript. However, note that an average speech rate for a comfortable and clearly orally paced presentation is about 100-130 words per minute. Given that your presentation should be about 20 minutes, you can work towards 1500-2000 words in your oral presentation/transcript.

Demonstration

You should also be prepared to give a demonstration of:

- Code and executables.
- Testing.
- Demonstrations of development over the lifetime of the module (these may happen in the seminar sessions or in one-to-one sessions with your tutor).
- A final session that demonstrates the functionality of the application that will be submitted, demonstrating as much functionality as possible and drawing attention to key operations and code.

As a reminder, the programming language to be used is Python.

The Presentation

The associated deliverables are highlighted in the requirements below, to be reviewed alongside the full Grading Criteria (located in Module Resources):

1. Code Quality – is the appropriate approach (techniques, algorithms etc) used (**Structure and Presentation, 10%**).
2. Meeting the design requirements (**Knowledge and Understanding, 25%**).

3. Application of concepts and features (**Presentation and Communication Skills, 30%**).
4. Comments on the code explaining it (**Criticality, 25%**).
5. Your README file containing a description of the implementation and instructions on how to execute the code.
6. How well you have organised the code.
7. Academic integrity applies to the demonstrations as mentioned above and your codes, where all sources can be placed in the README file and/or as part of the code commentary (**Use of Relevant Sources, 10%**).
8. Finally, ensure your justifications for any decisions made are based on good academic principles and that any academic sources you have used/referred to are clearly cited and that your references are presented in the required UoEO format.

Please Note: Appendices should not be used to extend the core report as reports should stand alone, complete and concise, without the appendices. They should really only be used if required, and only for supplementary and/ or supporting information. One key part of the exercises in this module is the need to be to be able to express ideas succinctly, concisely and with necessary brevity.

Learning Outcomes

- The knowledge and skills required to develop, deploy and evaluate the tools and techniques of intelligent systems to solve real-world problems.
- An understanding of contemporary research issues in the area of intelligent agent systems.

Turnitin Originality Check

Before submitting your assignment, it is important to check the originality of your work by submitting your assignment to [Turnitin](#).

By submitting your assignment to this tool you will receive an originality report which can be used to check that you have not included other authors work without correct citation. It is important to note that submitting your work to the Turnitin Originality Check tool does not count as a submission of your final work. You must still submit your assignment below.

Academic Integrity and Plagiarism

We take academic integrity very seriously. Academic integrity means acting with fairness and honesty, giving credit to others where you are referring to their ideas or research and respecting the work of others. Plagiarism is defined as: 'Using or copying the work of others (whether written, printed or in any other form) without proper acknowledgement'. Before you finalise your assignment take time to check that all your statements are backed up with supporting evidence, that all sources you use - whether referring to their ideas, quoting directly or paraphrasing - are correctly referenced in the text. Correct use of referencing acknowledges the academic whose work has informed yours, enables the reader to find the sources you have used and demonstrates your ability to find and analyse relevant information.

Failure to properly acknowledge the work of others is an academic offence and may result in your work incurring a penalty or, in the most serious cases, you being removed from the course for academic dishonesty.

If you are unsure about referencing or plagiarism there are useful resources available in the Study Skills Hub which is accessible from the menu on the left hand side. If you are still experiencing difficulties with academic integrity then you can [contact the Study Skills Team](#) for individualised support.

Submission Instructions

- Submit your saved document below before the end of Unit 11.
- After the deadline, the submission page will be locked.
- If you need to apply for Late Submission, please complete the [late submission of coursework form](#).

Feedback comments	— Hi, Overall, your submission demonstrates a basic grasp of the key concepts but falls short in fully meeting the assignment requirements. The presentation and code lack clarity and critical reflection, while the use of sources is limited. Greater attention to structure, deeper understanding, and stronger academic engagement are needed to improve. Structure and Presentation The presentation and submission show a basic structure but lack coherence in parts. Slides are somewhat filled or overly verbose, and visuals do not always support the spoken content effectively. The overall flow needs improvement to enhance audience engagement. Knowledge and Understanding You demonstrate a fundamental understanding of the subject matter, but fail to fully meet the assignment's requirements. Key concepts and techniques are either partially applied or explained, with noticeable gaps in technical accuracy and depth. Criticality There is limited critical analysis of your own work. Comments and justifications for decisions are often superficial or absent, and little evidence is provided to show reflection on alternative approaches or remediation of issues. Use of Relevant Sources References to academic or external sources are minimal or inconsistent. Where sources are included, they lack proper citation or are not integrated meaningfully into your discussion. This weakens the academic rigor of the work.
