

statements are backed up with supporting evidence, that all sources you use - whether referring to their ideas, quoting directly or paraphrasing - are correctly referenced in the text. Correct use of referencing acknowledges the academic whose work has informed yours, enables the reader to find the sources you have used and demonstrates your ability to find and analyse relevant information.

Failure to properly acknowledge the work of others is an academic offence and may result in your work incurring a penalty or, in the most serious cases, you being removed from the course for academic dishonesty.

If you are unsure about referencing or plagiarism there are useful resources available in the Study Skills Hub which is accessible from the menu on the left hand side. If you are still experiencing difficulties with academic integrity then you can [contact the Study Skills Team](#) for individualised support.

Submission Instructions

- Submit your saved document below before the end of Unit 11.
- After the deadline, the submission page will be locked.
- Use Harvard referencing for all citations and references.
- If you need to apply for Late Submission, please complete the [late submission of coursework form](#).

Submission status

Attempt number	This is attempt 1.
Submission status	Submitted for grading
Grading status	Graded
Time remaining	Assignment was submitted 3 hours 50 mins early
Last modified	Monday, 14 July 2025, 8:04 PM
File submissions	 Object Recognition Track 1 - Ali Alzahmi.pptx 14 July 2025, 8:04 PM  Turnitin ID: 2715014036  Transcript File - Ali Alzahmi.docx 14 July 2025, 8:04 PM  Turnitin ID: 2715014065

Grade	62 % (Merit)
Graded on	Sunday, 20 July 2025, 9:57 AM
Graded by	 Stelios Sotiriadis

Feedback comments

Code submission is missing.

Knowledge and understanding of the topic:
The presentation gives a clear overview of classical ML approaches to object recognition. Concepts like HOG, SVM, and KNN are explained accurately, and CIFAR-10's limitations are understood. The discussion remains within foundational scope but is well applied.

Presentation and communication skills:
The structure is clear and the language is accessible. Technical terms are explained for a general audience. However, the transcript is text-heavy and could be more concise for a live talk. Supporting code is only briefly mentioned without showing or referencing actual outputs.

Criticality:
There is fair analysis of strengths and weaknesses, and thoughtful comparison between SVM and KNN. The role of high-dimensional data and the curse of dimensionality is well noted. Further depth could be added by reflecting on when these methods still have an edge over deep learning.

Structure and presentation:
The flow is logical from dataset to evaluation. The breakdown of confusion matrices and model behaviour is helpful. Still, the absence of included code samples or clear figures limits how convincing the findings appear.

Use of relevant sources:
Well-chosen and properly cited references are used throughout. They support claims on method choice, dataset design, and toolkits. Integration into the explanation is consistent, grounding the discussion in credible work.
